

## **HP BUSINESS CRITICAL SYSTEMS**

HP has trusted MB Foster as a channel partner, lab partner (creating critical data access components for HP), and Platinum Migration Partner for more than two decades. MB Foster works closely with the HP Business Critical Systems division to provide migration services for those transitioning to an HP Integrity server running HP-UX, OpenVMS, Linux and Windows.

Our three stage process of assess, plan, and implement has helped numerous customers migrate from one application and platform to another. Our legacy migration services reduce your risk of migration while insuring that they have the most cost effective solution that is delivered on time and on budget.

For other operating environments like Solaris and AIX, we offer unmatched expertise in understanding both the business and technical challenges in moving to an HP server. Our process has helped hundreds of customers transition data and applications successfully, with minimum disruption to the business and project governance that keeps the project visible and on track to all key stakeholders.

For those transitioning to HP Integrity Servers, we offer the following:

- Critical business expertise in understanding applications and how they meet your business needs
- A proven process for successfully transitioning applications while reducing risk and managing costs
- Technical expertise in existing software infrastructure, including HP-UX, OpenVMS, Solaris and AIX
- Mission critical delivery of highly scalable software products and software infrastructure proven at thousands of installations

**Call us at 1-800-ANSWERS so that we can show you how we partner with you to transition applications to HP Integrity Servers.**
