

REVEAL™ *Automated Archive and Retrieval*

“Automated Archive is the ideal solution for legacy systems. It’s easy to cost justify; there’s simply no efficient way to handle archiving without it.”

Most companies have requirements to store reports for an extended period, provide fast and easy access to archived reports and ensure disaster recovery. They also have to meet strict legal and regulatory retention requirements balanced against the internal need to reduce storage costs—even as storage needs grow by leaps and bounds.

Does your hard copy or fiche retention strategies meet all of the requirements? Are they cost effective? What happens when paper or fiche records get misplaced, damaged or destroyed? How much time and money are you spending on creating and storing fiche or, worse, printed reports? How long does it take to track down archived reports from fiche or storage?

With Automated Archive and Retrieval, you’ve got the perfect and cost-effective automated report retention solution to complement your REVEAL electronic report distribution and warehousing system. A solution many businesses discover pays for itself very quickly.

Features

- Eliminates paper storage, microfiche and microfilm
- Eliminates operator assistance to retrieve storage media—a true “lights out” storage solution
- Provides instant and transparent access to archived reports, which can be located, downloaded, searched and printed from user desktops
- Automatic archive based on designated parameters, such as the number of generations or days before archive
- Requires no additional training for users
- Controls access to reports in storage with REVEAL PinPoint security rules
- Meets legal, company and government record retention requirements easily and inexpensively
- Delivers rapid return on investment

“Reveal is costing us a small fraction of what we would have spent on fiche. But the increased productivity we have achieved across the business makes the fiche saving small by comparison.”
