

REVEAL™ PRODUCT SHEET

“Report Warehousing” - a different way of managing your report inventory and distribution needs, whether internal, through the firewall or via the web

Every organization has the need to capture and distribute thousands of report pages to their end users. They also struggle with how to do this cost effectively, while maintaining data security and remaining quick and efficient.

Reveal is a highly effective a central repository of reports and documents accessible from standard Internet web browsers. It captures, catalogs, indexes and maintains output from multiple sources - mainframes, midrange and network-based platforms.

Reveal allows all users to turn information from multiple data sources into meaningful information - delivering the right information, in the right format, to the right people, at the right time. Reveal works independently of software applications, on multiple platforms and has numerous output options, including Internet, e-mail or printer.

Benefits

- ◆ Reduces corporate costs associated with printing and distributing reports
- ◆ Reduces host print workloads
- ◆ Reduces storage costs
- ◆ Provides instant electronic notification of the latest version of a specific report
- ◆ Provides IT administrators the ability to add/delete/modify reports & user profiles through simple point-and-click operations
- ◆ Provides quicker access to time sensitive data
- ◆ Allows users to create their own analysis by providing copy, paste & exporting functions
- ◆ Allows scheduled reports to be executed via production runs or on-demand
- ◆ Allows users to forge through data, enabling them to view their business from different perspectives

The heart of the Reveal solution is the Universal Report and Document Warehouse. Reports, documents and native files are compressed and stored in a secure library with version control, retention and archive rules, user administration and statistical tracking functions.

Development and programming of multiple copies/versions of individual reports for different users or groups are no longer necessary. Security is accomplished through Reveals PinPoint™ Security, which provides the ability to define and enforce viewing privileges down to individual columns of data on a page/report.

Printing a report has never been easier. No more 1000 page printed report to find out your bottom line. Just like other Windows applications, Reveal allows you to select a specific page or pages to print along with the printing formats.

Features

- ◆ Purchase on NT today – capture data from your legacy systems (ex. HP e3000, Sun, VMS). After migration has been implemented, reports can be captured from the old system and the new platform for verification
- ◆ Reports are stored and accessed electronically - time formerly spent printing, bursting and distributing can now be focused on other areas
- ◆ IT administrators can add/delete/modify reports & user profiles through simple point-and-click operations
- ◆ Users can create their own analysis by using the copy, paste & export functions
- ◆ IT staff is now free to concentrate on migration related issues
- ◆ Scheduled reports can be executed on-demand or in production run
- ◆ Continuity of information is maintained during migration
