

EXPRESS START - MBF-ENTERPRISE

*Making the right choices
for your multi-platform environment*

When information in the enterprise resides on various platforms, the need to access this data securely and reliably becomes imperative. This three-day program will instruct your IT staff in using MBF-Enterprise in your multi-platform environment to meet all of your data access and delivery needs.

Our Professional Services Representative will work with your team to examine your production environment and install/verify MBF-UDALink and MBF-Enterprise in your environment. With your technical staff we will create environments, establish host configurations and troubleshooting methodologies to prepare for a smooth and efficient 'first production' effort.

Administrator Program

You will be instructed in the installation and configuration methods for MBF-UDALink and MBF-Enterprise. Tips are provided to assist you in system usage planning.

The program also includes an overview of the MBF-UDALink Driver features, functions and benefits. You will be instructed in accessing data from your HP e3000, HP9000 and additional platforms using popular desktop products such as MSAccess, Impromptu etc.

The process of updating databases as part of the program is also reviewed. Client requirements are important; therefore, we will instruct you in methodologies for data source setup on your client desktops and various methods of troubleshooting and associated logging methods you can use.

Host Configuration

You will be instructed in accessing data from your HP e3000, HP9000 and additional platforms using popular desktop products such as MSAccess, Impromptu etc. We will review the process of updating databases as part of the program.

End Users

Your end-users will be given an overview of MBF-Enterprise. They will be instructed in the concepts of accessing data from the enterprise, including HP e3000 through the use of MBF-Enterprise and popular desktop products.
