

EXPRESS START - MBF-UDALINK REPORTER

New and Existing Users of MBF-UDALink can benefit training to enhance their product knowledge

Express Start MBF-UDALink has been designed to get your team trained quickly and economically. This three-day program features one day of Administrator training, one day of Introductory (User) Training and one day on-site consulting.

Your end users will be trained in using MBF-UDALink to access data from your HP e3000 or HP9000 and deliver it in a variety of different formats ranging from sub-files to spreadsheets, able to be read by popular desktop products or posted to a website.

Your technical staff will learn MBF-UDALink, its features, functions and capabilities, how to set up File Definitions, Views, Profiles and how to configure MBF-UDALink for optimum performance.

Our skilled Services Professionals will examine and prepare your production environment, then install, set-up and verify proper execution of the product. Templates for future processes will be created. Having onsite knowledge of your environment enhances future customer support requirements.

Procedures Creation

You will be instructed in Procedure Creation, (a) ad-hoc reporting (b) output in server based file format (c) output in PC-based file format (d) storing for future use (e) running on-line or as a batch process and retrieving for execution after saving.

Computational Expressions

Learn also how to create efficient Computational Expressions and how and where they are used most effectively.

Procedure Modification

You will learn how to modify a procedure including adding or deleting files and fields as required.

Administrators

Your administrators will be instructed in the installation and configuration methods for MBF-UDALink. Tips are provided to assist in MBF-UDALink set-up and usage. To assist in system usage planning, an Introduction will be provided into creating Profiles for the system and users, creating Views and File Definitions to provide the access your end users require.
