

EXPRESS AUDIT

*A great way to determine if you are using
the best methods and approaches*

Express Audit is the best way to determine if your methods and approaches are being applied in the most effective manner within your environment. With this three-day program, (tailored based on findings) we will review and evaluate your efforts to-date from both a technical and strategic standpoint, then recommend enhancements, provide tips and techniques and reinforce through training.

Onsite Consultation

We will review your production environment and your efforts from a technical and strategic standpoint. Based on proven Best Practice methods, we will make recommendations and provide tips & techniques that will ensure your data access methodology meets your needs. We will create templates for your future use. Knowledge is transferred to you at both the theoretical and practical level.

Review Installation

Software installation on all servers (HP e3000, HP 9000 & NT) will be verified, as will your client installations.

Review Settings

We will examine your System Profiles, User Profiles and Listener Job Settings to ensure you are using MBF-UDALink to the best advantage for your specific data access needs.

Review Servers

Your installation on the HP servers will be examined to determine if you are configured for the best performance possible based on your data access processing requirements. Your Host Configuration for driver clients will be examined to ensure the best user access methods are in place.

Review Data Environment

A review of your data environment will be undertaken to determine the type or types of data sources you are or will be accessing.

Customized Approach

We will assist you in incorporating Best Practice techniques and customizing your data capture efforts by creating Views and/or templates for future use. When you are ready, we can help you plan for future training to further your MBF-UDALink expertise.

Course Outline

Review Production Environment

- ! Review Installation
- ! MBF-UDALink Reporter
- ! MBF-UDALink Driver
- ! Clients and Servers
- ! 2 tier/point to point
- ! 3 tier/server to server
- ! Review Settings
- ! System and User profiles
- ! Listener settings
- ! Review Host Setup
- ! Performance optimization
- ! Host configuration
- ! Review Data Environment

Technical And Strategic Review

- ! Review data access environment
- ! Procedures
- ! File Definitions
- ! SQL
- ! Views
- ! Strategic plan review

Recommendations

- ! Customized training based on review
- ! Best practices
- ! Tips and techniques

Preparation for Future Efforts

- ! Create Views
- ! Create templates
- ! Sample applications
- ! Plan future training/consulting
