

## EXPRESS PLAN

### Even the best projects can go awry Forge your future with Express Plan

Express Plan can assist your planning efforts and enable your environment to perform to the standards you want.

Designed to facilitate projects related to defining, developing and deploying MBF-UDALink enabled solutions.

Our three-day program will benefit new and existing customers who require a project plan allowing them to implement proven techniques immediately. Our experienced Professionals will review the production environment and develop an approach incorporating proven techniques. Templates are created to assist with future efforts.

Add more value to your investment by being prepared for new projects. You can rely on MB Foster's knowledge of your environment to facilitate your customer support requirements should the need arise.

#### Review Customer Requirements

We begin with an in-depth review of your Technical Plan for data capture and access to provide us with the knowledge to analyze your data access Strategic Plan to determine if all requirements are being met in the most cost efficient and expedient manner. The status of your data access project will be reviewed to determine which Best Practice data access methods best suit your needs.

#### Review Installation

Software installation on all servers (HP e3000, HP 9000 and NT) will be verified, as will your client installations.

#### Review Settings

We will examine your System Profiles, User Profiles and Listener Job Settings to ensure you are using MBF-UDALink to the best advantage for your specific data access needs.

#### Review Servers

Your installation on the HP servers is examined to determine if you are configured for the best possible performance based on your data access processing requirements. Your Host Configuration for driver clients is also examined to ensure the best user access methods are in place.

#### Review Data Environment

A review of your data environment will be undertaken to determine the type or types of data sources you are or will be accessing.

#### Customized Approach

We will assist you in incorporating Best Practice techniques and customizing your data capture efforts by creating Views and/or templates for future use. When you are ready, we will help you plan for future training efforts to further your MBF-UDALink expertise.
