

# MBF-SCHEDULER

WINDOWS® SCHEDULER

## JOB SCHEDULING FOR MICROSOFT WINDOWS SERVERS

MBF-Scheduler is a robust job scheduling product for Windows servers. It allows automation of tasks run by scripts. It expands and replaces basic Windows Task Scheduler capabilities and functions. MBF-Scheduler opens the door to full administrative control over the management, running, scheduling, maintaining complex dependencies and relationships between jobs.

## MAINFRAME STYLE FEATURES

Does the basic Windows scheduler crumble when you attempt to coordinate hundreds of batch jobs? With mainframe-style features in MBF-Scheduler that can't happen. You can automate daily, weekly and monthly processes, control job sequences with complex job linking, create, update and delete jobs, leverage job queues, input priorities, job fences and job limits. Make use of command line features such as variables and loops. Generate command variables and inline date input, making it easy to convert existing batch jobs and to feed data to applications expecting to read input parameters. MBF-Scheduler lets you manage Windows jobs the way you would manage mainframe jobs.

## HEAR IT FROM OUR CUSTOMERS

*"What has set MB Foster and MBF Scheduler apart from its competitors and competing products is the MB Foster team's responsiveness."*

- **Terry Simpkins, Director Business Systems, Measurement Specialty Inc.,**

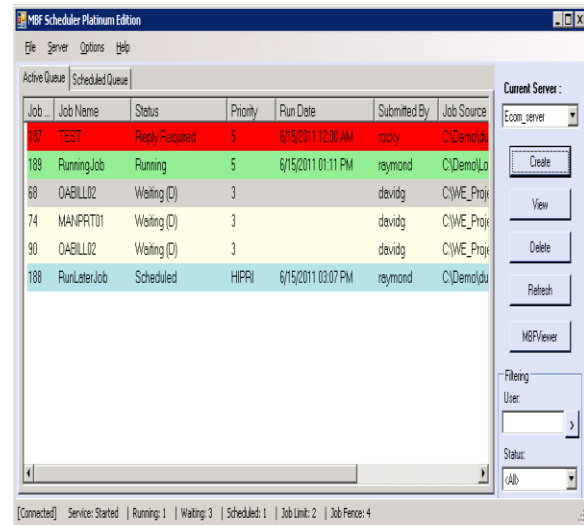

## KEY BENEFITS

- Eliminate manual process
- Kick-off and monitor jobs on other Windows servers
- Run hundreds of jobs a day without failure
- Discover which jobs finished and which did not after a server crash
- Automatic email notification on success or failure
- View job Stdlists during and after running

## SYSTEM REQUIREMENTS

Windows Server 2003 or higher O/S:

- Minimum 2GB RAM and 200GB Disk
