

UDACentral

Data Migrations: Explore, Clean, Migrate

THE POWER OF INTEGRATION

Data and application migrations happen for a number of reasons. Whether it's because of a merger or acquisition, a hardware upgrade, an application change, a decommissioning, or any other reason, having the right tools is half the battle.

MBF-UDACentral reduces the risk, and allows data migration processes to be automated.

Jumping over hurdles and risks are possible with UDACentral's visual workbench to develop projects and perform the transformations, while taking care of the nuances across O/S's and database platforms.

PROVEN TECHNOLOGY

UDACentral runs on Windows, UNIX and LINUX, and any operating system that supports the Java Developers Kit (JDK). Supported environments include;

Source	Target
CSV	
XML	
MS SQL Server	CSV
Oracle	MS SQL Server
Sybase	Oracle
MySQL	Sybase
IBM-DB2	MySQL
CACHE	IBM-DB2
H2	Ingres
Apache Derby	H2
Progress	Apache Derby
PostgreSQL	Progress
EnterpriseDB	PostgreSQL
Interbase	Enterprise DB
HSQLDB	HSQLDB
Image (HP3000)	Eloquence
Allbase (HP3000)	
KSAM (HP3000)	
Eloquence	

UDACENTRAL FEATURES INCLUDE

- Visual Interface
 - o Simple interface to explore, learn about your data
- Any DB/OS to Any DB/OS migration
- Data Mapper
 - o visually map data from source to target
- Database and JDBC Explorer
 - o touch your data, see the meta data, and plan for transformation
- Speed
 - o Fast -80 million records in 90 minutes
- Automated migration scripting
- 15 levels of debug with logs
 - o Identify issues during migration
- Data rules creation
- Export and Import:
- Table/Column splitting
- XML Mapper:
- And more....

UDACentral caters to a wide range of integration and data transformation needs to reduce the complexity associated with data migration projects. The combination of UDACentral's core features and speed, at which data can fly, means your migration project will be on time, on scope, and on budget.
