- Read and basic JDBC write access
 - Insert, Delete, Update
- HP3000 Sources
 - Image, TurboImage, Image/SQL, Allbase
 - KSAM, MPE files
 - Powerhouse PDL
 - MBF-FD (File Definitions), Suprtool-SD, and other self-describing files

HEAR IT FROM OUR CUSTOMERS

"They really had some foresight when they put this product together. It makes our HP 3000 look like one gigantic SQL database."

Mark Farris, Lowrance

KEY ROLES

UDALink plays an integral role in your organization, whether you need to:

- Extract data to spreadsheets
- Provide client server access to data
- Integrate application data with Web applications
- Perform ad-hoc and month-end reporting
- Perform data cleansing
- Facilitate a data migration project
- Build and implement a custom data repository

GLOBAL USE & ADMINISTRATION

UDALink is installed at numerous HP3000 sites around the globe delivering millions of transactions, as well as reports and extracts every day.

Administration and security is provided for, as part of the included configuration utilities. ODBC/JDBC administrators have an array of features to ensure that the integrity of your data stays intact.

WANT MORE DATA ACCESS?

J2EE/JDBC: Supports pooled connections, pool statements, prepared statement, callable interface, two phase commit, scrollable result set and more.

UDACentral: Provides centralized data access and management.

UDASynch: Synchronize an Image database with Oracle, SQL Server, MySQL, Sybase, Ingres, Postgres, EnterpriseDB, DB-2 and more.
